RESIDENTIAL CONSTRUCTION IN METROPOLITAN AREAS FROM 1942 THROUGH 1950

HE tables in this report show the actual number of new family accommodations for which building permits have been issued in the metropolitan areas of the United States for the years from 1942 through 1950. All metropolitan areas as defined by the 1940 United States Census are covered. All suburbs, cities, towns or unincorporated areas from which sufficient data could be secured have been included. There are some communities, however, parts of metropolitan areas in which building has taken place, which are not included in these tabulations due to the inadequacy of the records kept in these communities. Considerable correspondence has been had with each of these communities in an effort to include them.

All communities are listed alphabetically under the metropolitan area of which they form a part. This is true even where the principal city is in one State and some of the communities in its metropolitan area are in an adjoining State; for instance, Camden and various other New Jersey communities are listed under Philadelphia as these communities form an integral part of the Philadelphia Area as defined by the United States Census.

The figures given for each community for each year represent the total number of new family accommodations for which building permits were issued in that year. Thus, a permit for a single-family residence is represented in the figures by (1), a two-family building by (2), a four-family building by (4), and a permit for a sixty-family apartment is counted as 60 family accommodations. All types of residential buildings are included in these figures regardless of how they were financed or by whom they were built. Slum clearance projects built by the community, the State or the Federal government are housing accommodations and therefore included.

At the bottom of the list of communities for each metropolitan area the total for all of the listed communities in that area is shown in red. For most metropolitan areas this figure is approximately complete, as those communities in which figures are not available generally have done relatively little building. In a few metropolitan areas, however, it will be noticed by looking over the list of communities that a few important suburbs are not available. For many metropolitan areas figures have been included for the unincorporated portions of the area. These are indicated under the name of either the township (Twp.) or county, followed by (UP) for unincorporated portion. The yearly totals for all of the communities listed in this report are:
